## **CLAIMS**

- 1. A process for treating, especially for caring for, making up or coloring, at least a part of the human body, by applying at least two treatment products simultaneously to a localized area of said part of the human body as a function of characteristics of the localized area and/or of a predetermined design, in order to obtain a mixture of said treatment products directly on the localized area, at least one treatment product comprising at least one solvent in a proportion of at least 10% by weight.
- 15 2. The process as claimed in claim 1, in which the application of several treatment products is performed by jet.
- 3. The process as claimed in claim 2, in which at least one jet is produced by a thermal means capable of forming bubbles of treatment product.
- 4. The process as claimed in claim 1 or 2, in which at least one jet is produced by a piezoelectric means.
  - 5. The process as claimed in any one of claims 2 to 4, in which at least one jet is deflected.
- 30 6. The process as claimed in any one of the preceding claims, in which a step of viewing a chosen coloration or make-up design takes place before the treatment products are applied.
- 35 7. A device for carrying out the process as claimed in any one of the preceding claims, characterized in that it comprises a means for positioning said part of the human body, and a means for applying treatment products to said part as a function of a

predetermined design.

5

- 8. The device as claimed in claim 7, characterized in that the application means comprises a plurality of treatment product reservoirs and a plurality of spraying nozzles, each nozzle being fed by a reservoir.
- 9. The device as claimed in claim 7 or 8, characterized in that the application means comprises at least two reservoirs and/or at least two nozzles.
- 10. The device as claimed in any one of claims 7 to 9, characterized in that it comprises means for controlling the position of the application means relative to the part of the area to be treated.
- 11. The device as claimed in any one of claims 7 to 9,
  20 characterized in that it comprises means for automatic control of the total amount and of the partial amounts of each product as a function of the desired visual characteristics.
